The U.S. lift Truck division situated in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's initial home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. begun to import assembled forklifts as part of a national equipment expansion venture. Early sales of this manufacturing equipment focused on large business groups, the armed services and on state-run firms. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education became the new focus for improving quality and product development.

Daewoo started the first home-based lift truck business in 1967, and rapidly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's superior technological advancements combined with sales success placed them in a position of substantial expansion of their lift truck operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the highly competitive North American materials handling industry. This project proved highly successful for Daewoo and their forklift product sales expanded greatly. In 1984, the company finished development of a new facility to help in producing high end value-added goods for export. In 1993, the corporation had a global sales network and started exporting versions they had established through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into overseas markets.
